Hardy Grafted Nut Trees Bear Paying Crops Quickly

ORDER NOW

PLANT EARLY

We are prepared to supply large, thrifty, well-grown stock at prices that cannot be beat. Our nursery is the largest nut tree nursery in the state. The Michigan State College of Agriculture has made plantings in 1932-33 of our vigorous, root pruned stock. Do not confuse our budded and grafted nut trees with those usually offered by General Nurserymen at prices nearly as high as we quote; for our stock is both costly and far superior to seedling stock for nut production. Yearly, we lose thousands of trees upon which buds and grafts have failed to take. Fruit trees are easy to propagate and being shallow rooted are easily dug by machine while our deep rooted nut trees must be hand dug which is expensive and hard labor.

Nut Crops Pay and are Easily Handled

Nut orchardists say their plantings compare favorably with fruit as a paying proposition. One man claims a planting of 1,000 Thomas walnut trees will net from \$3,000.00 up to several thousand dollars more annually after the trees come into bearing.

Larger Trees at a Saving This Spring

This year we can supply 4 to 5 ft. grafted stock in walnut and pecan trees at the prices quoted for 2 to 3 ft. stock a year ago. 4 to 5 ft. stock \$2.00 per tree; \$5.00 per 3; \$19.20 per dozen.

Grafted Stock Ready for Delivery

This spring we have a fine lot of walnut and pecan trees of the following kinds:

THOMAS BLACK WALNUT—Fast growing tree. Very productive. Nuts are large and smooth. They crack easily by machine or hand. Most extensively planted in commercial orchards.

OHIO BLACK WALNUT—Fast growing tree. Nuts resemble Thomas in size but are more pointed near apical end. Productive. Good cracking quality.

ALLEN BLACK WALNUT—Good growing tree. A State College find and prize winner of 1932 nut contest. Supply limited.

NORTHERN THIN SHELL PECANS—We have the best hardy, thin-shell varieties of Butterick, Busseron, Major, McCallister. McCallister is a hican. It is the largest pecan grown in the U. S., and measures nearly three inches in length. Very hardy and ornamental.

NEW & RARE VARIETIES THAT WILL BE READY FOR FALL OF 1934—Foremost of these will be the Broadview English Walnut; it came from British Columbia, Canada where winters are very cold and severe. The Broadview has withstood temperatures as low as 35 below zero and produced fine crops thereafter. It is an annual producer of nuts that compare favorably with No. 2 California Diamond Walnuts. Recommended for northern climates by Northern Nut Growers Ass'n. Limited supply of grafted old trees at \$5.00 per tree. **CRATH**—Another new variety similar to above; also coming from Canada; nut is longer than Broadview; very hardy; price same. **RUSH TREE HAZEL**—Not entirely new but of such wonderful quality and in demand that it merits its introduction; nuts are nearly as large as filberts; trees grow to size of the peach and bear very heavily; plants often bear second year after planting; they are best filler trees for a northern nut orchard; self-pollinating; can be supplied in strong plants at \$1.00 each. **OTHER NEW NUTS WE HOPE TO HAVE**—Luther Butternut; Mann Hickory; Dyer Hickory; Large Heartnuts; English Butter-Jap; and a few others. All ribbon winners at Kellogg Nut Contest 1932.

Important to Those Interested in Seedling Stock

Write for special prices on Pecan and Walnut seedlings of all sizes for stocks and reforestation your woodlot with timber trees. **USE THE ORDER FORM ON LAST PAGE.**
